

M7 Aerogel DFIC Heatshield Installation Guide

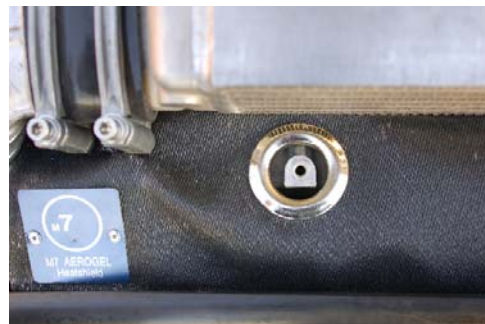

- If installing at the same time as the DFIC, installation of the Aerogel Heatshield takes place before page 10 of the DFIC install guide sequence.
- If installing the heatshield *after* installation of the DFIC, removal of the intercooler and air diverter is required before continuing (refer to DFIC install guide or call our office if you need help).

M7 Aerogel DFIC Heatshield Installation sequence:

Lay the Aerogel Heatshield down so that the reflective side faces the engine and the cloth side faces the bottom of the intercooler.

The two metal grommets wrap around the posts on the intake manifold that are used to secure the air diverter. Make sure the entire heatshield is as flat as possible.

Re-install the DFIC and air diverter. Be sure to tighten down all bolts.

Close hood and enjoy!
